DETAILED ACTION

Claim Interpretations

As per the claims, the applicants use of "/" will be interpreted to correspond to "and".

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 7-9 and 15-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Ogata et al., U.S. Patent Application Publication No. 2002/0037462.

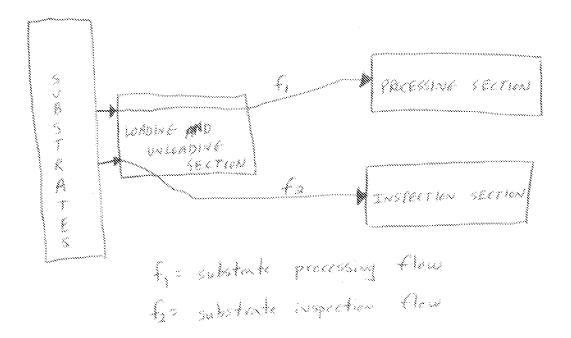

In light of the interpretation above, claim 1 recites:

A method of controlling a substrate processing apparatus that comprises: a loading and unloading section loading and unloading a substrate; a processing section processing the substrate; and an inspection section inspecting the substrate, the substrate transferable between the sections, wherein a substrate processing flow and a substrate inspection flow are independently executed, the substrate processing flow being a flow in which the substrate loaded into the loading and unloading section is carried to the processing section to be processed, and the substrate inspection flow being a flow in which the substrate loaded into the loading and unloading section is carried to the inspection section to be inspected.

Application/Control Number: 10/581,073

Art Unit: 2121

As best understood, this method may be graphically depicted as follows:

With regards to claims 1 and 2, as best understood, it appears that Ogata et al., U.S. Patent Application Publication No. 2002/0037462 teaches such the method claimed (e.g. see [0062]-[0067]).

As per claim 7, Ogata et al. teaches a plurality of inspection units (e.g. Figure 7 elements 63A, 63B and 63C).

As per claim 8, the rejection of claim 1 is applied herein.

As per claim 9, the rejection of claim 2 is applied herein.

As per claim 15, the rejection of claim 7 is applied herein.

Art Unit: 2121

As per claim 16, Ogata et al. teaches a control section controlling the overall operations of the apparatus (e.g. Figure 1 element 7).

Allowable Subject Matter

Claims 3-6 and 10-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

As per claims 3 and 10, the prior art of record fails to teach the method of claim 1 further comprising a feature wherein the substrate inspection flow is executed for an external substrate that is loaded into the loading/unloading section from an external part of the substrate processing apparatus, when the inspection section is not engaged in the inspection of the substrate having undergone the substrate processing flow, in combination with the other claimed features and or limitations as claimed.

As per claims 4-6 and 11-14, specifically dependent claims 4 and 11, the prior art of record fails to teach the method of claim 1 further comprising a feature wherein the substrate processing flow and the substrate inspection flow are executed in a unit of a lot of the substrates, the substrate inspection flow is executed for a lot having undergone the substrate processing flow, and the substrate inspection flow is executed for an external lot loaded into the loading/unloading section from an external part of the substrate processing apparatus in a manner that an execution period of the substrate inspection flow for the external lot does not overlap with an execution period of the substrate inspection flow for the lot having undergone the substrate processing flow, in combination with the other claimed features and or limitations as claimed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ronald D. Hartman Jr. whose telephone number is
